Features

- Built in database for 250,000 plus users. No need to delete user records just disable.
- Built in transactions database for 500 million plus transactions.
- Built in report server. Get secure reports through a Web Browser from your laptop or desktop anywhere in your Company's network or virtually anywhere through your Company's VPN.
- Integrated firewall and network security filters.
- Fingerprint Biometric reader with self-contained database stores up to 4,000 fingerprint templates. Other readers will be integrated to match your requirements up or down. Use the same reader type as your Security Access Control to avoid double training in different enrollment software.
- No need to install software in a PC or server.
- Provides dual factor authentication with incorporated proximity card reader. Optional magnetic card reader.
- Verifies users in less than one second.
- Automatically transfer data to your Access Control System or Payroll System. Our engineers will guide you with the integration for data transfer.
- Wired and Wireless network connection.
- Error proof and harsh environment Entry and Exit buttons (event type).
- Automatically prints a ticket to comply with labor regulations.
- Close data system certification to comply with labor regulations. Assures data integrity and security.
- Encryption and hash verification tokens to protect data against changes and provide an audit track.
- Prints a weekly summary report with space for the employee's signature to comply with labor regulations.
- Customize the user application with your company logo. You will need to provide logo before delivery of the equipment.
- Create administrators with full access and create limited access users with report generation rights only.
- General purpose reports.
- Option to integrate RFID for automatic entry/exit registration and assets control. Call to quote.

CA-1600 biometric reader matches the fingerprint of the person seeking entry to the identity of the card-holder. Other readers may be integrated or other biometric reader models may be used depending on your requirements.

CA-1600 provides a 1:1 fingerprint verification utilizing an embedded HID OEM proximity reader that negates the need for external Wiegand input.

CA-1600 prevents unauthorized access via loaned, lost or stolen proximity cards by requiring that the fingerprint of the person seeking entry match the identity of the cardholder.
